Background

I am currently employed as a full-time PhD candidate in Polymeric Composite Materials at the Division of Materials Science, Department of Engineering Sciences and Mathematics, Luleå tekniska universitet (LTU) in Luleå, Sweden. I currently teach in 4 graduate-level courses offered in the subject of Polymeric Composite Materials. The courses are offered as part of the LTU-offered Master programme in Composite Materials and the international joint Master programmes in Materials Science and Engineering EEIGM/EUSMAT (European School of Materials Science and Engineering) and AMASE (Advanced Materials Science and Engineering). Previously, I taught at the École Européenne d'Ingénieurs en Génie des Matériaux (EEIGM) in Nancy, France in undergraduate- and graduate-level courses in Solid Mechanics, Viscoelasticity, Linear Elastic Fracture Mechanics, Mechanics of Composite Materials. I also contribute to the research activities of the Polymeric Composite Materials subject at LTU, working on integrated computational and experimental mechanics of polymers and polymer composites with a focus on fatigue, fracture and damage (see my Research Statement for more details). In addition, I am involved in the supervision of graduate students in the context of Master theses and project courses. I am actively involved in the continuous improvement of teaching practices in the subject of Polymeric Composite Materials by proposing new experimental activities for students (composites repair laboratory, bi-axial strain gauge measurements) as well as improving the virtual learning space of the courses offered in the subject. Furthermore, I actively contribute to the pedagogical research in Higher Education; currently I am working on a contribution (article and oral presentation) to the upcoming *Development Conference for Swedish Engineering Education 2019*.

Higher Education Courses and Study Programmes

Subject Related Courses

As detailed in my resumé, I have received a BSc in Aerospace Engineering (2010) from Politecnico di Milano (Milan, Italy), a MSc in Mechanical Engineering (2012) from Drexel University (Philadelphia, USA), a MSc in Space Engineering (2013) from Politecnico di Milano (Milan, Italy), a PhD in Materials Science and Engineering (exp. Dec. 2019) from Université de Lorraine (Nancy, France) and a PhD in Polymeric Composite Materials (exp. Dec. 2019) from Luleå tekniska universitet (Luleå, Sweden). The courses I attended in these programs qualify me to teach within the specializations of Polymeric Composite Materials, Computational Mechanics, Experimental Mechanics, Computational Materials Science. I have also published peer-reviewed journal articles and conference papers and given several oral presentations in international conferences and seminars on Polymeric Composite Materials and Computational Mechanics (see my full list of publications for a more detailed account).

Pedagogic Courses

I have successfully completed the 7.5 ECTS course *Qualifying course for university teachers* at Luleå tekniska universitet (Luleå, Sweden) in February 2019. During my stay at the École Européenne d'Ingénieurs en Génie des Matériaux (EEIGM) in Nancy, France, I also completed the following courses (in-presence or online) on Higher Education: Teaching in Higher Education (4 ECTS), Teaching Sustainability and Sustainable Development (2 ECTS), Oral Communication and Body Language in the Workplace (3.5 ECTS). Furthermore, in 2017 I completed the *Software Carpentry Instructor Training Program* proposed by *The Carpentries* to become a Certified Workshop Instructor. *The Carpentries* is non-profit association whose aim is to teach software development and data science skills to researcher and to promote Open Science values and best practices.

Experience of Teaching and Supervision within Higher Education

Teaching

T7020T - Composites: Design and Numerical Methods, 7.5 ECTS, Luleå tekniska universitet, 2018, Autumn Term, Master's Level

I am responsible for the laboratory sessions devoted to Mode I delamination testing (Double Cantilever Beam) of composites and calculation of Uni-Directional (UD) elastic properties from experimental data.

T7005T - Aerospace Materials, 7.5 ECTS, Luleå tekniska universitet, 2018 - 2019, Spring Term, Master's Level

The course is divided into 3 main thematic sections: fatigue, fracture and damage in fiber-reinforced composites; joining techniques for composites; advanced metallic alloys. The first part, on fatigue, fracture and damage of composites, involves laboratory sessions of which I have been in charge. In the 2019 edition of the course, I have also defined the research topic of the laboratory session and designed the

learning activities in the lab. I also improved the virtual learning space of the course by restructuring its content and appearance. Furthermore, I helped the design of the seminar activity in the section on advanced metallic alloys.

T7012T - Composite Materials, 7.5 ECTS, Luleå tekniska universitet, 2018 - 2019, Autumn and Winter Term, Master's Level

I am responsible for the laboratory sessions devoted to manual manufacturing of composites, mechanical testing and calculation of Uni-Directional (UD) elastic properties from experimental data.

T7011T - Mechanics of Fiber Composites, 7.5 ECTS, Luleå tekniska universitet, 2019, Winter Term, Master's Level

I am responsible for the laboratory sessions devoted to mechanical testing of composites and calculation of Uni-Directional (UD) elastic properties from experimental data.
